Subject: Data on Huntsman Ethylene Oxide

Aimee,

Here's what I've gotten so far (spreadsheet attached).

First, I got a list of all of the EPNs that had reported EO emissions in our 2017 emissions inventory using our central registry query page:

<http://www15.tceq.texas.gov/crpub/>

There were 30 EPN's total with routine EO emissions, and 40 more with only non-routine EO emissions.

Then I got a list of all active air permits and PBRs (from the same database) at the site.

I narrowed your list down to 14 case-by-case permits and 142 PBR's. I looked at the MRT's from the permits and copied down all of the EPN's. I cross tabulated them to tie the routine EO-emitting EPN's and was able to get permits for 18 of them (you can probably do a better job with a human eye [I just used a computer]).

Feel free to call tomorrow if I can help further as you research the permits. I may be able to do a batch download of some basic files (e.g., technical review summary for a PBR), so please check in with me tomorrow about ways we can refine your search.

Best,

Jesse Lovegren, Ph.D., P.E.
